ShakeoutPro™ Jobsite Staging App

Save Time, Money, and Effort with Our Jobsite Shakeout & Staging App

Are you still using stacks of paper and drawings during the shakeout process and trying to visualize where each piece of steel goes on the jobsite?

What a lot of work — and time consuming!

We have a solution to cut your staging time significantly. ShakeoutPro™ is an innovative staging and shakeout app that saves you money, time and effort by using a 3D model to illustrate the parts of a building and where they belong on the jobsite. With this app, your fully realized project fits in the palm of your hand on a smartphone or tablet. By scanning the barcode on any part, bundle or crate the app will digitally identify the appropriate parts and highlight them within the 3D model right on your screen.

This is the future of construction and it's easy to use. If you haven't tried this use of technology, you're missing out.

What ShakeoutPro™ can do for you:

- Save time, money and effort in the unloading and staging of steel on the jobsite
- Maximize efficiency in layout process and increase productivity from day one by enabling teams to find and place steel faster
- Provide a rotatable/scalable 3D BIM model allowing erection teams to easily interpret plans
- Quick access to a listing of the contents of your truck, crate or bundle
- Ability to status parts by color coding and tagging as received, staged, installed, missing, damaged or unused
- No additional special equipment or software required
- All project data can be accessed from the cloud
- Purchase on a per project basis during the quoting process using eQuote
- Once purchased for a project, any number of users may use the program

ShakeoutPro™ is available for Apple and Android devices. Authorized Builders can launch and load ShakeoutPro™ from your Toolbox app.
