

December 2019

Tekla BIMsight is replaced with Trimble Connect

CBC Steel Buildings proudly partners with Tekla, a leading modeling software solutions provider. Utilizing the Tekla Structures program as a BIM software solution on selected projects ensures the interoperability of 3D with 2D systems.

Tekla, who has previously offered Tekla BIMsight, a free software application, will discontinue to support and distribute Tekla BIMsight at the end of this year. In its place, **Trimble Connect will replace BIMsight effective immediately.**

Trimble Connect is free software that is a central component for Trimble's offering and will enable you to work on your models, point clouds and other information on your PC, laptop or mobile device.

Tekla will support the current version of BIMsight until December 31, 2019. From January 1, 2020, you can still use your existing Tekla BIMsight product without support. Your personal data of Tekla BIMsight databases will be removed on the same day.

Update your software before the end of the year!

Trimble Connect for Desktop is available for download from the website <https://connect.trimble.com/>
