ROOF SYSTEM

MS-24 Standing Seam
Regal White

BUILDING END-USE

Industrial Storage

Pacific Woodtech, a manufacturer of engineered wood products selected CBC for the fourth building on their Burlington, Washington campus. As a result of a dynamic building environment, Pacific Woodtech experienced a need for increased onsite raw material storage.

The rigid frame clearspan main building offers ample storage for those products needed in Pacific Woodtech's manufacturing process. The partially enclosed single slope unheated structure has added truck loading and unloading necessary to manage their materials. The buildings utilize MS-24 Standing Seam roof systems with R-Panel walls.
