BUILDING END-USE

Seed Storage and Processing

Vikima USA, Inc. is a seed storage and processing facility located in the Port of Skagit, Washington. Mild winters and cool, dry summers have long been ideal for seed crops in the Pacific Northwest. Vikima Seed is one of the largest suppliers in the world of vegetable seed for the professional market.

This project provided expansion capabilities for Vikima Seed Co. One of the main requirements for seed storage and processing is climate control, making this CBC building ideal. The main building is a rigid clear span with a lean-to that supplies a truck loading ramp for the company. The facility has an R-panel wall system covered by a MS-24 Standing Seam roof.
