What's on the Dashboard?

Product and Energy Bulletins Available on Dashboard

A lot of information comes along with constructing and erecting a custom pre-engineered metal building. CBC has numerous reference materials to help you along the way. The [CBC Builder Dashboard](#) is your first stop when it comes to finding the answers you need. Along with many other reference materials, we house Product and Energy Bulletins on the CBC Builder Dashboard for your convenience.

CBC Steel Buildings is committed to ongoing improvements in all aspects of our business. [Product Bulletins](#) are periodically issued to notify Builders of a change or enhancement to our product offerings. These Product Bulletins are initially shared through monthly eNews or email. An archive of Product Bulletins is located on Builder Dashboard in the Resources section.

Product Bulletins

CBC is also committed to providing our Builders with the most current, innovative and economical energy solutions in the metal building industry. We actively stay abreast of competitors' products and innovations, strategizing on opportunities for improvements, reporting local or state code issues and disseminating energy compliance information to keep you informed. As part of this knowledge base, we include a series of [Energy Code Bulletins](#) available for reference on the Dashboard.

Energy Bulletins

These resources, and many more
are all available on the [Builder Dashboard](#).
