## COMcheck: A Helpful Tool to Stay Compliant

COMcheck <sup>™</sup> is a commercial energy compliance tool from the U.S Department of Energy. The COMcheck software helps determine if a building meets the requirements of the IECC (International Energy Conservation Code) prescriptive based paths or ASHREA Standard 90.1.

When utilizing eQuote for your projects, a COMcheck question may arise. You can request assistance within your eQuote tool. In your "**Project Actions**" dropdown select "**Request COMcheck File**". A popup box will open as seen below.

In this box, simply identify the required energy code(s), the building conditioning type (Conditioned, Semi-Heated, Unconditioned), and any project specific information such as preferred roof, wall door, or window insulation assemblies.

After making your selections and providing any special instructions, select "**OK**". Your request will be sent to your local division's Energy Resource for review. Once reviewed, the Energy Resource will follow up and you will receive an electronic file to be used in the COMcheck software for your project. Getting

## **Energy Update**

this process started early in the quote stage allows more flexibility, time, and options to accommodate specific code requirements.

If you have more questions regarding COMcheck, visit: Energy.gov/comcheck.
