

# California Golf Club

## LOCATION

San Francisco, CA

## SIZE

21,749 sf

## WALL SYSTEM

Reverse R-Panel

## ROOF SYSTEM

Standing Seam

## BUILDING END-USE

Golf Club Maintenance/Storage

California Golf Club of San Francisco's maintenance building consists of three pre-engineered metal buildings that use gable and asymmetrical framing systems.

Two clear span structures comprise the two-story maintenance building that encompasses storage for tractors and equipment, a fertilizer room, and a machine shop on the first floor. The second floor has offices, an employee break area, and dormitory rooms.

The third building is a one-story tractor barn featuring a fuel and wash station. Unique features include 21 total prismatic skylights among the buildings and roll-up doors to make housing large equipment easier.
