

Thermo King Solar Canopy

LOCATION

Modesto, CA

SIZE

2,900 sf

ROOF SYSTEM

PowerShingle Solar Panels

BUILDING END-USE

Solar Canopy

This 2,900 sf solar canopy generates 48.6 kW of renewable energy for Thermo King in Modesto, California. The canopy is built using a single slope framing system and PowerShingle solar panels that serve as the structure's roof. Originally considering a conventional metal roof canopy, Thermo King opted for PowerShingle due to its financial benefits and renewable energy production. The solar panels lock together and protect all assets stored beneath the canopy.
