ROOF SYSTEM

R-Panel
Polar White

BUILDING END-USE

Farm Shop/Office

Diamondback Farms, a large-scale potato farming operation, is supported by this modern farm facility designed to balance functionality with a clean, contemporary aesthetic. The building consists of two single-slope PEMBs complemented by two lean-tos, creating a practical layout for operations while maintaining visual interest. CBC's R-Panel wall system in Pearl Gray combined with the R-Panel roof system in Polar White establish a modern exterior palette well suited for the rural setting.

Architectural details elevate the building's appearance, including a covered patio and a covered vestibule entryway, both enhanced with rake and eave extensions. Glass overhead doors, expansive windows, and walk doors also utilize glass to flood the interior with natural light and contribute to the building's sleek, modern look. At the base of the structure, a CMU wall provides durability while complementing the horizontal and vertical placement of the wall panels above. Inside, wall liner and partition walls provided by CBC create efficient, organized interior spaces for both shop and office functions. Finished in a coordinated scheme of blacks, whites, and grays, this facility reflects a streamlined, professional design that supports Diamondback Farms' operational needs while reinforcing a modern agricultural brand presence.
