Charcoal

## BUILDING END-USE

Gymnastics Academy

Mid-Columbia Gymnastics in Pasco, Washington, is a purpose-built gymnastics academy designed to support training, recreation, and community growth for the Tri-Cities area. The clear span gable metal building provides an open, column-free interior ideal for specialized gymnastics equipment and flexible programming. The exterior features a Reverse R-Panel wall system in Pearl Gray with a Slate Gray wainscot, complemented by Cypress Green accent panels that highlight the main entrance. Midnight Black window trim and an R-Panel roof in Charcoal complete the building envelope.

Developed as the organization's second location, the Pasco location expands Mid-Columbia Gymnastics' presence in response to growing regional demand. The building was designed to function not only as a training space, but also as a community-focused center that serves local families and supports continued growth in the Pasco area.
